

SULTEX LATERAL AND CENTRAL TUCKERS FOR FULL WIDTH REED

Optional equipment available for the new A9000 & A9500 Air Jet Weaving Machines
Upgrade kit available for Mythos, Mythos E-Tec and L5500

Features / Technical Information

- Especially designed for weaving with full width reed.
- Pneumatic tuck-in solution, well known from the cut reed version, which is already approved on L5500; improved mounting via horizontal movable lever.
- The movement of the tuckers is safe & consistent; moving away during the beat-up and remaining fixed during the tucking action.
- Depending on the fell of the cloth, the tuckers and scissor can be easily adjusted horizontally and vertically.
- The necessary opening between two continuous lengths of fabric is less than 30 mm.
- The tuckers are available for a maximum speed of 700 picks/minute – for higher speeds, the tuckers for weaving with cut reed are available.

Your benefits

- Same design for center and right side.
- Reduced waste – auxiliary selvage is no longer necessary.
- Very easy to adjust to new working widths (no need to cut the reed).
- Short style change, from cut selvage to tucked-in selvage.
- Support of all benefits known from full width reed technology.
